Acknowledgment

This project owes its success to the invaluable contributions of the following individuals and institutions, whose support has been instrumental in its accomplishment.

First, the researchers would like to express their gratitude to Adamson University for allowing them to engage with the barangay through its academic service learning program. This experience has not only enriched their understanding internally but has also enhanced their professional capabilities by instilling in them the ethos of service aligned with their respective fields.

The researchers also extend their heartfelt appreciation to the C.S. Department for allowing them to engage with the real world and make meaningful contributions to their society by aiding the needed system of an organization.

None of this would have been possible without the active involvement of Barangay San Antonio I and its officials. Their invaluable insights and cooperation have played a pivotal role in shaping the development of the profiling system and in comprehending the diverse needs and goals of the barangay.

Lastly, the researchers would also like to recognize the steadfast support and invaluable contributions of Sir Jay Abaleta, whose assistance has been vital throughout our ASL journey.

This journey was filled with learnings and memories, each moment contributing to our growth and understanding. Once again, the researchers offer their heartfelt gratitude to Adamson University, C.S. Department, the Barangay San Antonio I and its Officials, Sir Jay Abaleta, and their cherished loved ones for their invaluable support and encouragement.

CHAPTER 1: INTRODUCTION

1.1 BACKGROUND OF THE STUDY

Residents hold a very important role towards a functional and developing barangay. They serve as the backbone of the community through engagement and participation. Therefore, officials hold the responsibility of its monitoring and management, especially in terms of the records. As such, it is crucial for barangay officials to handle tasks particularly concerning the maintenance and organization of accounts. Barangays being the smallest sector of the community, they are also the first-hand source of the residents' individual profile. Each information is very crucial to a citizen's personal details.

Barangays are not only responsible for managing their residents internally but also have a crucial obligation to report regularly to their respective municipalities for monthly census updates. They are in-charge of providing the tally of residents in terms of various categories and fields for a much accurate demographic report.

In today's present era, most LGUs have already switched to the modern way of handling records of their inhabitants. Digital tools such as 'barangay systems' have emerged as innovative solutions to their daily tasks. These paved the way to a better, more accurate and most convenient method of management. However, the question remains if the majority have embraced this type of modernity, especially the smaller sectors in rural areas.

1.1.1. THE HISTORY OF BARANGAY SAN ANTONIO I

Way back then, the river of Ilang Ilang had been a part of San Antonio. At that time, it was still a creek originating from Ilaya, which divides into two other interconnected streams. The inhabitants of Noveleta referred to the area leading to Ilaya as "Sambal," which translates to '*sangang ilat*' or a branch of a creek. A solitary road follows the course of the Ilang-Ilang River towards the entrance of the Barangay, known as "M.

Salud Street" from then until now. Based on stories, the church was the one who gave the blessing for the barangay to be named under the patron saint, St. Anthony of Padua.

In 1896, Noveleta, which was a barangay under Kawit, was declared as an independent town. San Antonio was one of the first few barangays created, in which Mariano Salud was the first *gobernadorcillo*.

In the 14th of July 1990, the *Sangguniang Bayan ng Noveleta* passed a resolution that perceives San Antonio to be divided in two barangays for better governance. At this point, San Antonio I and San Antonio II were created.

Originating from an agricultural barangay, San Antonio I is now undergoing a major change and is now healthy and progressive. The barangay is made up of the two subdivisions; Camella Homes and Jordan Estates, and the rest of the barangay proper.

Legal basis of the declaration of the Barangay

Resolution No. 11-90 of July 14, 1990 | Sangguniang Bayan, Noveleta, Cavite

Patronal Fiesta/Foundation Day

June 12 & 13

Geographical Location:

Barangay San Antonio I is approximately 1 kilometer away from the town of Noveleta. It is surrounded by the following barangays:

North	Barangay San Jose I and II
South	Barangay San Antonio II
East	Barangay Putol Kawit
West	Barangay Sta. Rosa I

1.1.2 MISSION, GOAL & VISION

Mission

The standard of living of the citizens by providing opportunities for everyone to attain basic necessities, especially the poor. Uphold equal implementation of justice and eradicating illegal activities and vices.

Goal

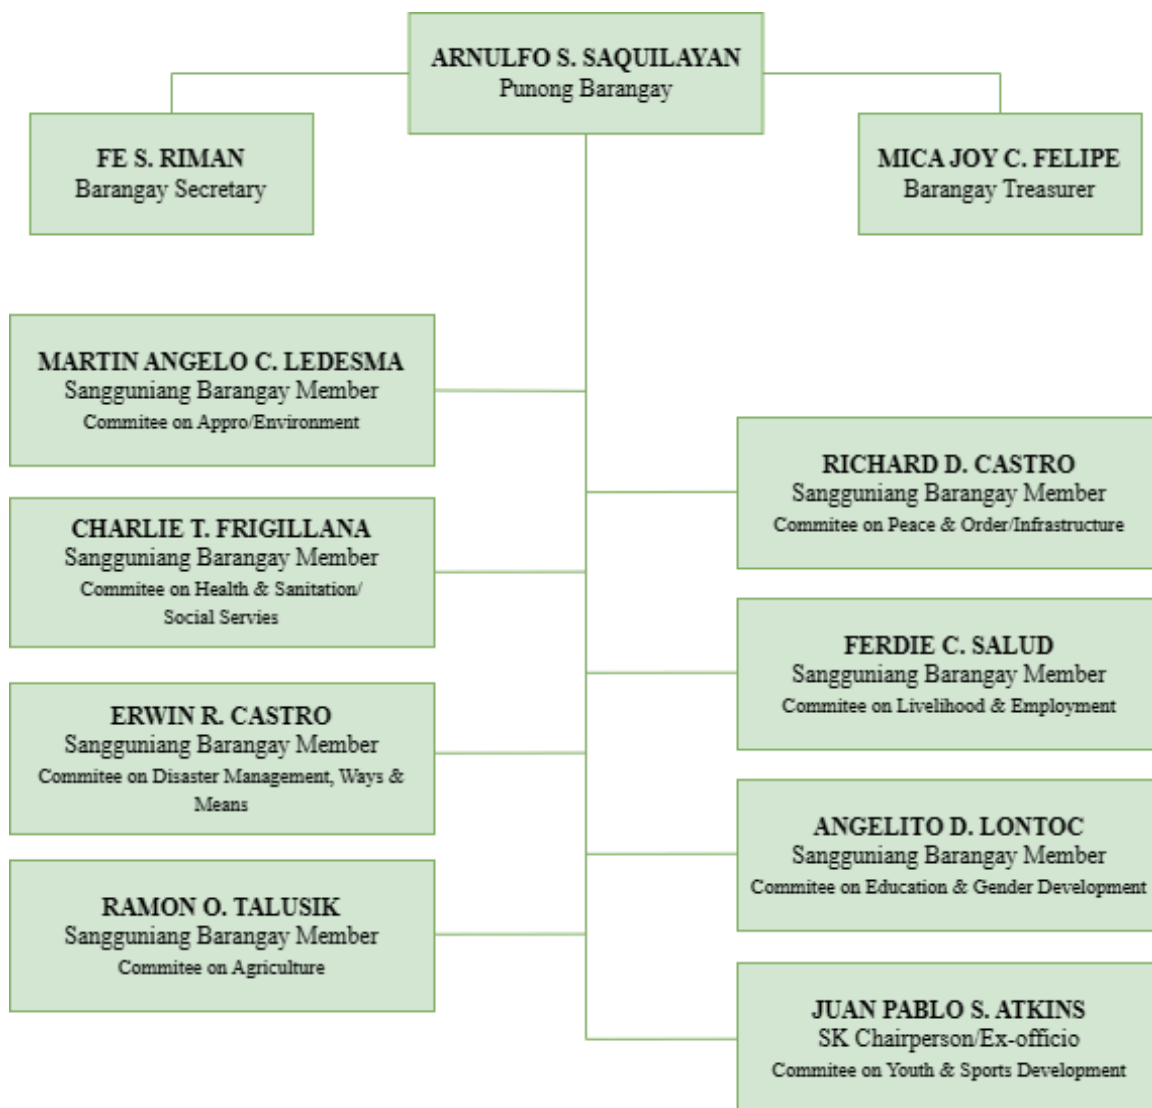

Ensure good governance, and livelihood training programs for the citizens, with robust environmental conservation and protection programs.

Vision

Barangay San Antonio I is an exemplary Barangay with a prosperous community characterized by unity, faith in God, and cooperation in obeying laws, while wholeheartedly embracing cleanliness and orderliness in the environment.

1.2. ORGANIZATIONAL STRUCTURE

1.3. STATEMENT OF THE PROBLEM

Barangay San Antonio I currently uses basic spreadsheet software for data storage, which limits their ability to manage and analyze the demographic data of their residents, thus delaying important decisions and their submission of reports to the Municipality of Noveleta. More specifically, the following are the limitations that come with using basic spreadsheet software as their main database.

- **Data Integrity** - Due to the manual nature of spreadsheet software and its lack of data validation, the information stored within the database can be prone to errors and inconsistencies.
- **Scalability** - The spreadsheet-based approach struggles to accommodate the increasing volume of resident records, making data increasingly hard to manage and interpret.
- **Data Security Concerns** – Storing resident data in spreadsheets presents security and privacy concerns since sensitive information may be subject to unwanted access, alteration, or loss. Inadequate data protection methods expose the barangay to potential breaches that threaten resident confidentiality and trust.

Given these challenges, there is an urgent need to shift from spreadsheet-based data management to a more reliable and secure database management system. Implementing a dedicated database solution tailored to the barangay's needs will increase its efficiency, allowing Barangay San Antonio I to provide better services to its citizens.

1.4. OBJECTIVES OF THE STUDY

The study aims to develop a WPF application designed to store and manage resident information of Barangay San Antonio I by utilizing a Microsoft SQL Server as the program's database. With this in mind, the following will be the objectives of the study:

- To improve the searching, inputting, and retrieval of resident records of the barangay.
- To minimize errors in data entry through validation checks.
- To provide data visualization tools in the form of graphs to represent resident demographic data.
- To automate the demographic data report required by the municipality.
- To implement a secure login system with role-based access controls.

1.5 SCOPE AND LIMITATIONS

To address the objectives of the study we focused on specific areas outlined in the scope. However, it is important to acknowledge that the study will be limited by certain factors.

SCOPE

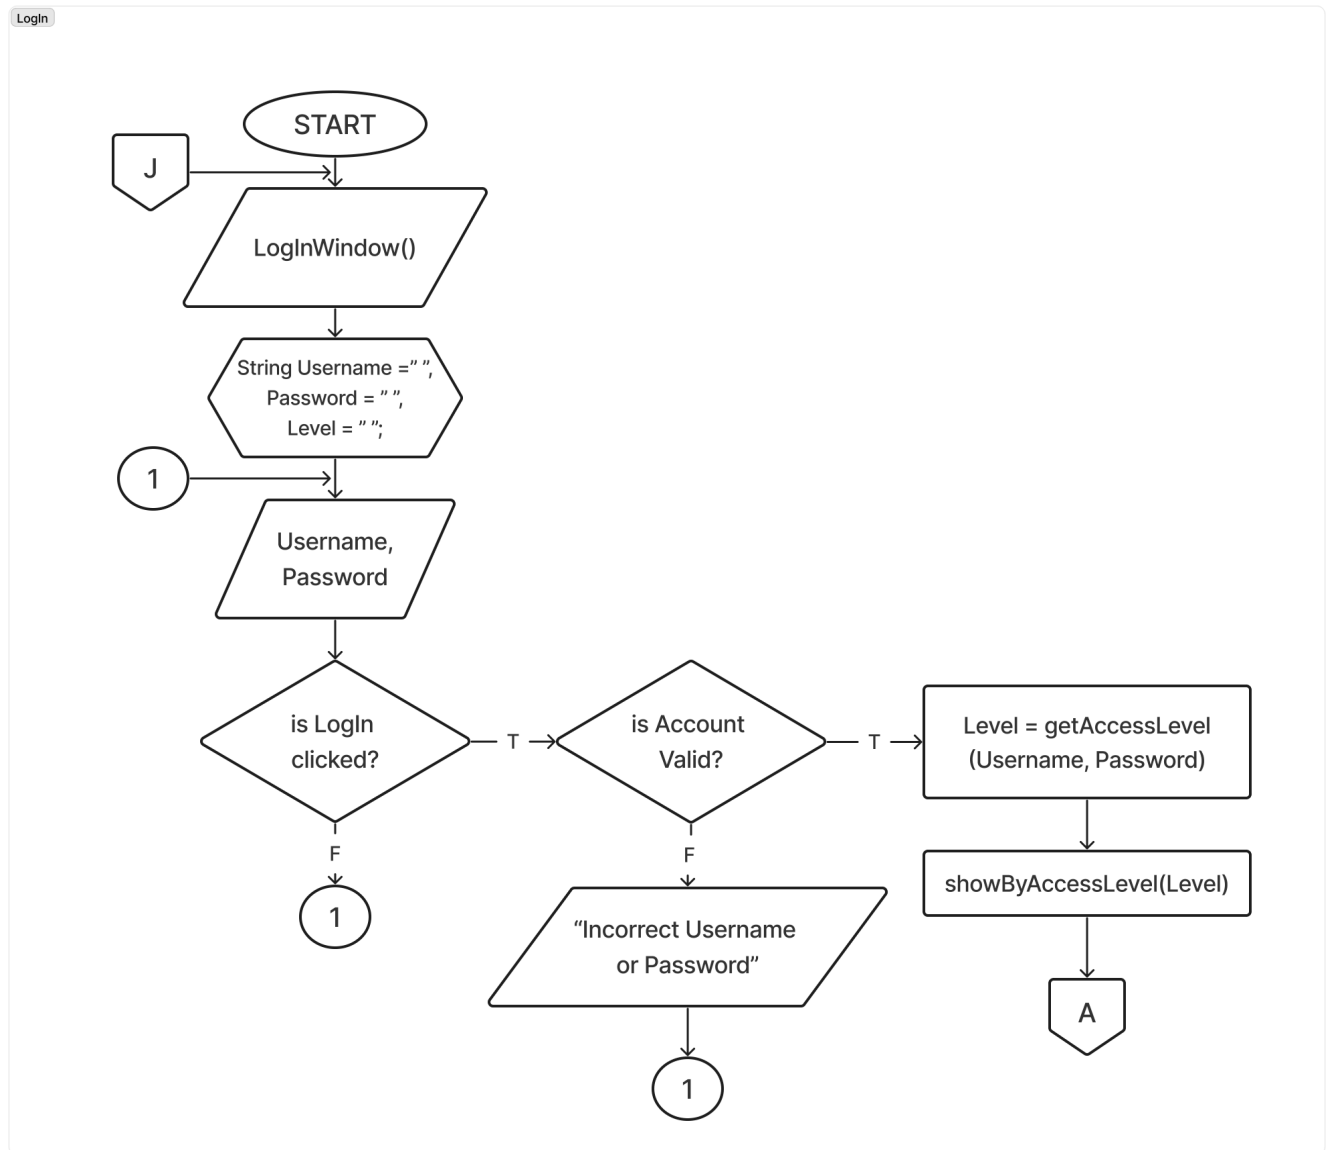

- Enable efficient searching, adding, and retrieving of resident records.
- Offer a dashboard to present statistical data derived from the demographic data of the barangay.
- Provide the capability to generate demographic data reports based on the requirements of the Municipality of Noveleta.
- Features a secure log-in system with different access levels for the barangay captain and other employees.

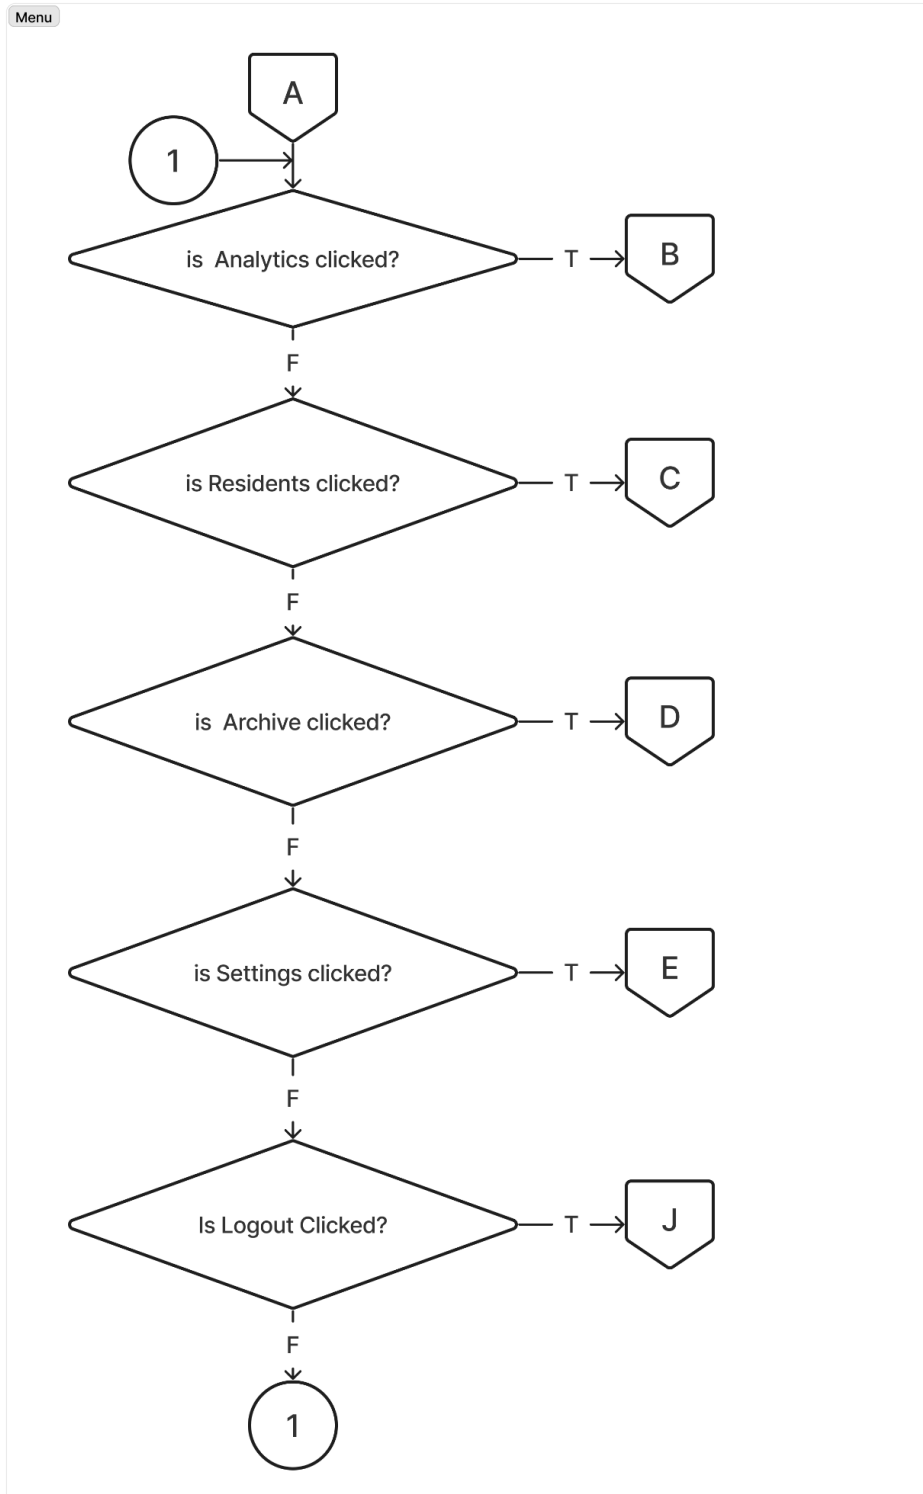

LIMITATIONS

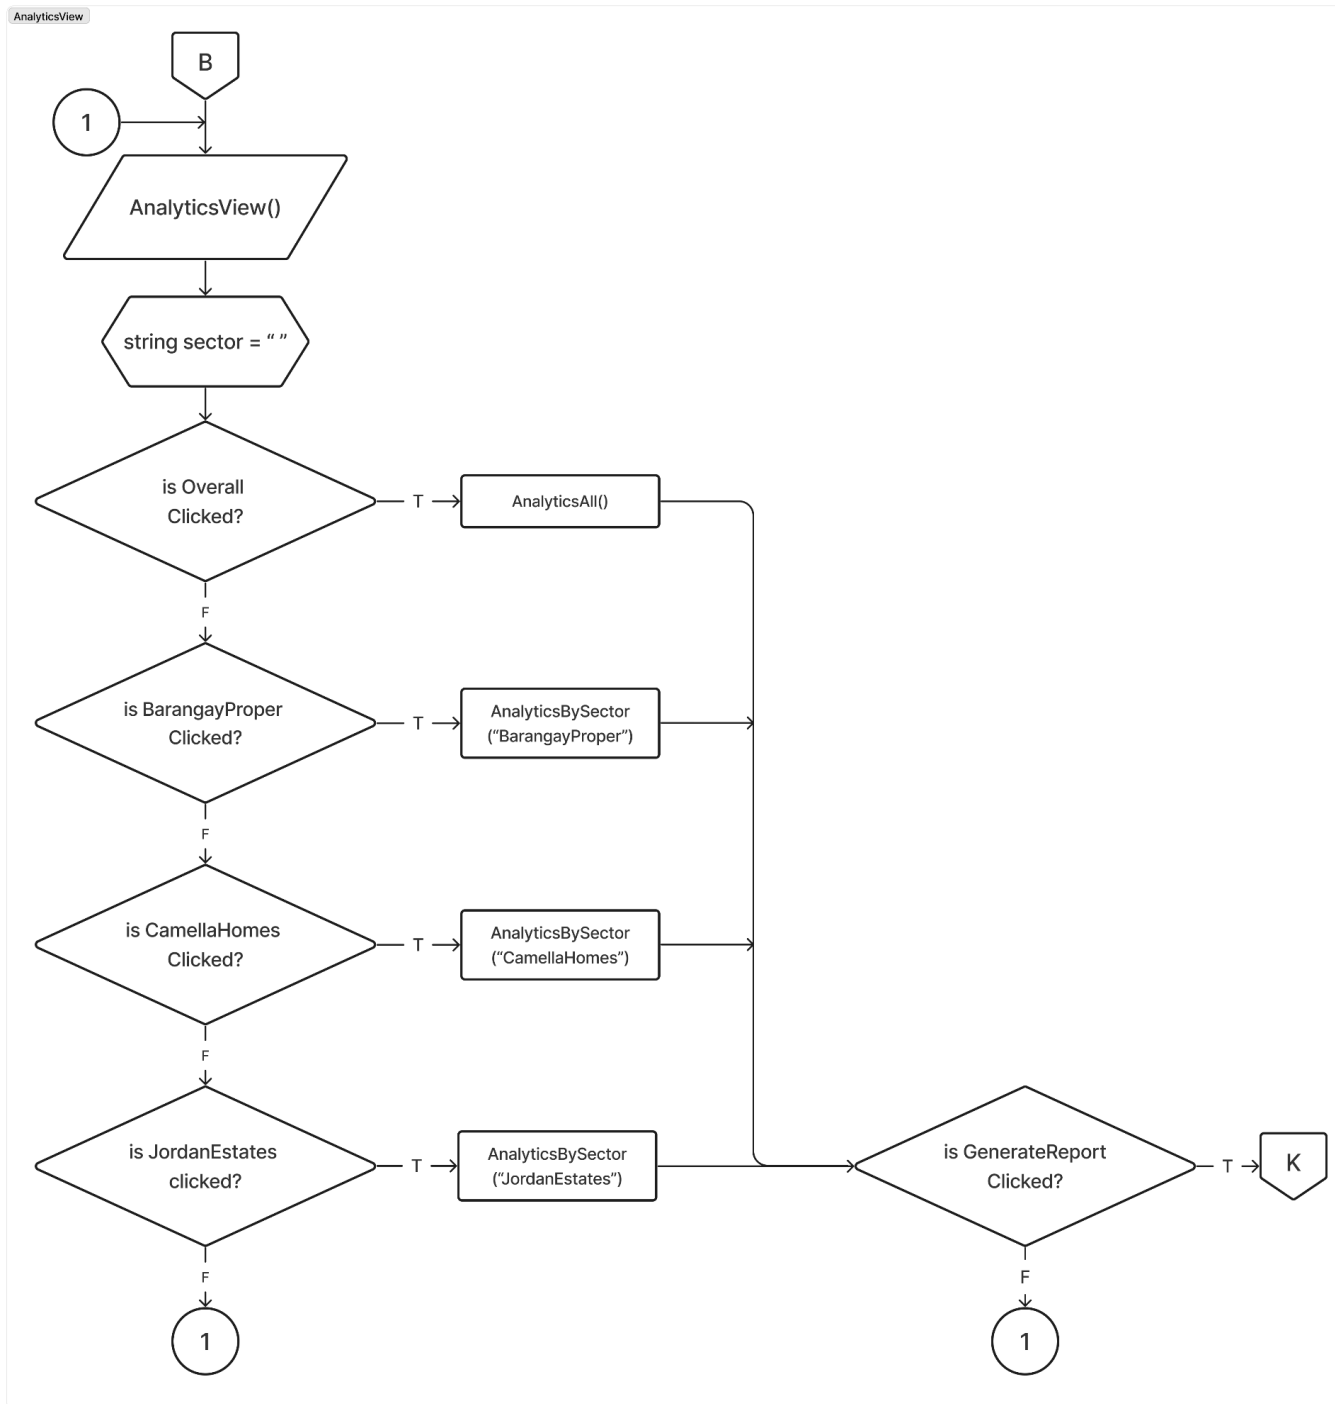

- The application is exclusively designed for Windows Desktop environments.
- Data cannot be shared between different devices at the same time, as it is stored only within a computer's local database.
- The database design and functionality are based on the barangay's needs, as identified during the preliminary interview.

CHAPTER 3: THE FORMS

3.1 ASL PLAN OF ACTIVITIES

**ADAMSON UNIVERSITY
ACADEMIC SERVICE LEARNING (ASL)**

ASL ACTIVITY PLAN

Subject: Information Management

Topic: Record of Barangay Inhabitants

Objectives: To develop a Windows desktop application that can search, input and retrieve resident records all while providing statistical insights and analyses derived from the database.

Activities:

1. Project Planning / Preparation

- a. Singing of Letter of Understanding
- b. Signing of Letter of Intent
- c. Completion of Consent and Release forms for off-campus activity (Waivers)
- d. Completion of Activity Form
- e. Informal Interview

2. Data Gathering

Task: Conduct an interview with our community partner to identify challenges they face in managing data, and collect all requisite data needed for our software project and documentation.

- a. When was the Barangay established?
- b. What led to its establishment?
- c. Could you provide a brief history of the barangay?
- d. What is the mission and vision of the barangay?
- e. What is the organizational structure of barangay San Antonio I?
- f. What key data does the barangay manage, and what methods are used for its management?
- g. Can we request a list of all the street names in the barangay, sorted by its sector?

3. Pre-development

- a. Design a high-fidelity prototype of the application in Figma to visualize the final product.
- b. Create a detailed flowchart to map out the entire process within the application.
- c. Develop an Entity-Relationship Diagram (ERD) to visually represent the relationships between the data entities.

4. Development

- a. Develop front-end code using XAML.
- b. Develop back-end code using C#.
- c. Integrate front-end and back-end systems.

5. Testing

- a. Conduct bug testing to identify and fix defects in the software.

6. Deployment

- a. Launch the application into the barangay's system.
- b. Provide training sessions to the community partner to ensure effective use of the system.

3.6 CLASS EVALUATION FORM

**ADAMSON UNIVERSITY
ACADEMIC SERVICE LEARNING PROGRAM**

CLASS EVALUATION FORM

Subject:	<u>Information Management</u>	Name of Professor:	<u>Jay Abaleta</u>
Department:	<u>Computer Science</u>	College:	<u>College of Science</u>
Name of Community / Organization Served:	<u>Barangay San Antonio I, Noveleta, Cavite</u>		

The rating to be entered in the table is the average of the ratings given by the students and interpreted As :

1=Strongly Disagree 2=Disagree 3= Neither Agree or Disagree 4=Agree 5=Strongly Agree

I. Preparation and Support

I received sufficient orientation about the community/organization I worked with	
I received sufficient academic preparation to successfully complete my ASL project	
I had opportunities to reflect on connection between course material and my ASL project	
Question about the ASL project were effectively addressed	
The ASL Teacher provided assistance when needed	

II. Cognitive Learning

ASL project helped me learn materials covered in the course	
ASL project helped me see real world application of course material	
ASL project made it easier for me to think about the information we covered in class	
I learned a lot from the class because of ASL project	
It was easier to remember things we covered in class because of the ASL project	

III. Affective Learning

Through my ASL project I made valuable contributions to the community agency / organization	
I am concerned about local community issues	
I intend to work in a career that will make positive contribution to society.	
I plan to help improve my neighborhood / community in the future	

Over-all average Rating _____

Interpretation _____

3.7 STUDENT EVALUATION FORM

ADAMSON UNIVERSITY ACADEMIC SERVICE LEARNING PROGRAM STUDENT EVALUATION FORM

Name of Student:	Aoay,	Student No.:	202210246

III. Affective Learning

1. Through my ASL project I made valuable contributions to the community agency organization	1	2	3	4	5
2. I am concerned about local community issues	1	2	3	4	5
3. I intend to work in a career that will make positive contribution to society.	1	2	3	4	5
4. I plan to help improve my neighborhood / community in the future	1	2	3	4	5

IV. Open-Ended Reflection

- Discuss ways in which your ASL project enriched your college experience.

ADAMSON UNIVERSITY ACADEMIC SERVICE LEARNING PROGRAM STUDENT EVALUATION FORM

Name of Student:	Espadero, Jan Lloyd, C.	Student No.:	202210031
Course / Year Level :	BS Computer Science /2nd Year	Subject :	Information Management
College:	College of Science	Department:	Computer Science
Name of Professor :	Jay Abaleta		
Name of Community / Organization Served:	Barangay San Antonio I, Noveleta, Cavite		

For each of the statement, indicate how strong you agree or disagree by encircling the number using following scale:

1 = Strongly Disagree, 2 = Disagree, 3 = Neither Agree or Disagree, 4=Agree, 5=Strongly Agree

I. Preparation and Support

1. I received sufficient orientation about the community/organization I worked with.	1	2	3	4	5
2. I received sufficient academic preparation to successfully complete my ASL project	1	2	3	4	5
3. I had opportunities to reflect on connection between course material and my ASL project	1	2	3	4	5
4. Question about the ASL project were effectively addressed	1	2	3	4	5
5. The ASL Teacher provided assistance when needed	1	2	3	4	5

II. Cognitive Learning

1. ASL project helped me learn materials covered in the course	1	2	3	4	5
2. ASL project helped me see real world application of course material	1	2	3	4	5
3. ASL project made it easier for me to think about the information we covered in class	1	2	3	4	5
4. I learned a lot from the class because of ASL project	1	2	3	4	5
5. It was easier to remember things we covered in class because of the ASL project	1	2	3	4	5

III. Affective Learning

1. Through my ASL project I made valuable contributions to the community agency organization	1	2	3	4	5
2. I am concerned about local community issues	1	2	3	4	5
3. I intend to work in a career that will make positive contribution to society.	1	2	3	4	5
4. I plan to help improve my neighborhood / community in the future	1	2	3	4	5

IV. Open-Ended Reflection

- Discuss ways in which your ASL project enriched your college experience.

3.8 COMMUNITY/ORGANIZATION EVALUATION FORM

ADAMSON UNIVERSITY
ACADEMIC SERVICE LEARNING PROGRAM

Community/Organization Evaluation Form

Name of Student : Aoav. Jan Michael J. Student No. : 202210246
Course / Year Level : 2nd Year BS Computer Science Subject : Information Management
Semester : 2nd Semester School Year : 2022-2023
Name of Professor : Jay Abaleta

Name of Community / Organization Served: Barangay San Antonio I. Noveleta, Cavite, Philippines

Please rate the student in the following manners:

	1 = Poor	2 = Fair	3 = Good	4 = Very Good	5 = Outstanding
1. Attendance / Punctuality	1	2	3	4	5
2. Dependability	1	2	3	4	5
3. Participation / Involvement	1	2	3	4	5
4. Skills / Quality of Work	1	2	3	4	5
5. Overall Performance	1	2	3	4	5

CHAPTER 4: REFLECTION

Aoay, Jan Michael

202210246

I'm forever thankful to Adamson University for the opportunity they gave me to serve my immediate community of barangay San Antonio I through this ASL activity. This experience not only allowed me to grow as a future professional and leader but also helped me understand the importance of community involvement. Additionally, having lived here all my life, the activity gave me a newfound appreciation for the people and the efforts that keep our community thriving.

As a computer science student, the activity forced me to go out of my comfort zone and dip my toes into front-end development, something our group always struggled with. Before this project, we spent most of our time doing back-end work, neglecting our UI by doing bare minimum designs. However, this ASL activity forced us to confront our weaknesses head-on. I learned XAML just for this project, and despite my initial apprehension, studying a new language was what I needed to finally get into the groove of designing. Now, I can proudly say that, without a doubt, I can develop great designs.

The activity also helped prepare me better as a future professional. Interacting with the barangay officials provided me with valuable experience when it comes to client interaction; it taught me the importance of communication and collaboration in real-world projects. It also helped us break our habit of only developing things we want. In most of our software development projects, our professors always gave us the freedom to do things our way, but the ASL exposed us to prioritize our client's needs over what we thought was right was the way to go.

Helping the barangay was one of the highlights of our ASL. Finding out that they had to painstakingly count each resident to summarize their data made me realize how crucial automation is. This experience showed me how important our job is when it comes to solving real-world problems.

Overall, I wouldn't change anything that happened in our ASL. Our ups and downs were what made the journey all worth it in the end. Each challenge we faced taught us resilience and adaptability, skills that are invaluable in both academic and professional settings.

Chua, Justine
202210213

Throughout our academic service learning (ASL) program, I encountered many new experiences and learned a lot. When I first learned that our final project would be the ASL, I felt a bit overwhelmed because we were assigned to develop a specific program for a barangay to use.

The most enlightening part of the ASL activity for me was dealing with the paperwork and documentation. I was surprised by the amount of paperwork and documentation that were needed for this project. It made me realize the importance of proper documentation and the procedures required to implement community projects effectively.

Before participating in ASL, I found it challenging to work with multiple people on a project. Coordinating different ideas, schedules, and working styles was often overwhelming. However, through this experience, I have greatly improved my ability to collaborate with others.

One of my biggest learnings from the ASL project was managing an SQL database. This technical skill is crucial for handling large amounts of data efficiently. I can apply this knowledge in future projects, both academic and professional, to create robust and scalable data management systems.

During the deployment of our program, I felt a strong connection to the spirit of St. Vincent. Seeing how our work directly benefited the community and knowing that we were making a tangible difference was incredibly fulfilling. By developing a program to manage their RBI, we significantly simplified their operations, making it easier for them to keep accurate records and generate reports. This improvement in efficiency directly benefits the community, as it allows the barangay officials to focus more on other important tasks and services.

The ASL experience has greatly contributed to my growth in academic pursuits. It inspired me to delve deeper into technical concepts and practical applications, motivating me to learn more so I can create even better projects in the future. If I could join ASL again, I would focus on even better time management and proactive planning. While our project was successful, there were moments where better foresight could have improved our efficiency and reduced stress. Additionally, I would seek more feedback from the barangay residents throughout the development process to ensure the program meets their needs as effectively as possible.

Dy, Audrey Margarette
202210296

Reflecting on the famous words, 'With great power comes great responsibility,' it becomes evident that the privilege of studying in a prestigious university carries a significant responsibility to give back to society. At Adamson University, as a student from the Computer Science Department, the Academic Service Learning project stands out as a crucial component of our curriculum. This initiative not only allows us to apply our academic knowledge in a practical setting but also emphasizes the importance of community engagement and service. It is a gratifying experience to extend our skills and contribute meaningfully to the residents of Barangay San Antonio I. And without taking this journey, I would not have had takeaways and realizations, which would help me nurture my chosen career in the next few years.

For this project, we were tasked to look for a barangay outside Metro Manila that we would like to offer a technological approach to ease their daily tasks. Eventually, our group decided to commit ourselves to Barangay San Antonio I located at Noveleta, Cavite. During the preliminary meeting, we learned that the barangay has still been relying on readily available applications on their official laptop, which is a spreadsheet software, in terms of managing the personal records of their residents. As computer science majors, we believe that this approach will pose some risks and threats in the long run. This circumstance led us to a decision to make a Residents' Management System for San Antonio I. It would be their designated platform wherein they can search, manage, and other utilities like a standard one would work.

With the program, the paperworks, and the presentation being done, I can definitely say that we have shared our work with pride and satisfaction. This has definitely brought out the best of us – not only in computer tasks, but also in team work, communication, public engagement, and even conquered our fear of public speaking. Our group certainly did not escape from conflicts and unfortunate circumstances, but we are grateful enough to execute and successfully deploy our program very smoothly.

Transitioning into my second year as a student brought a shift in focus, with the Academic Service Learning project as a memorable experience in shaping my academic journey. Engaging with Barangay San Antonio I weighed the importance of community involvement and tailoring solutions to specific needs. Witnessing the tangible impact of our efforts brought us a sense of purpose, motivating me to continue utilizing my skills for positive change. Because of this, I became more encouraged in achieving this kind of project in the future. I am more determined to excel better in the next few years of my remaining college attainments.

Espadero, Jan Lloyd
202210031

My experience with academic service learning (ASL) has been enlightening and has taught me priceless things. As a result of this reflective process, I now see the significant influence of being involved in the community, particularly the barangay.

Working with the local community and treating them like clients while interpreting their requirements was one of the most eye-opening components of the ASL activity. I found it difficult at first to approach strangers and ask them to be a part of our project. But as I got more involved in the process, I realized that it's not as difficult as I had thought to communicate effectively. With this newfound talent, I was able to better serve the community by addressing their concerns, which improved my ability to communicate with others.

I felt fulfillment with assisting the barangay's work over the ASL project, especially by simplifying their time-consuming task. We made governance more effective and freed them up to concentrate on other important issues by creating systems specifically designed to meet their requirements. This sense of service highlights the importance of utilizing my skills to benefit the community, instilling a deeper sense of purpose in my academic pursuits.

I learned a lot from my ASL experience, especially about database management, which is one of the major components of my degree. It also made me reflect as I assessed the feasibility of our suggested projects and realized how important technology is to improving communities. My perspective was broadened by this reflection, which also gave me an inspiration for lifelong learning and development.

Furthermore, the ASL exercise encouraged me to reflect on my place in society and think about the good changes I may make. By stepping over my comfort zone, I was able to take on challenges and grasp new opportunities for both career and personal growth. This life-changing event corresponds with the principles of St. Vincent, motivating me to live a life full of compassion, empathy, and service.

Overall, the ASL journey became an instrument in my academic and personal growth, offering invaluable knowledge and developing a deeper connection to my community. Moving forward, I'm very grateful for this experience as it gave a great benefit to me as a student and as a person, so, if I was given another chance to do ASL again, I would greatly accept it as it was a great practice for my future.

Garcia, Jeremiah Kim
202210215

As my First Academic Service Learning (ASL) experience comes to an end, it's been a long and transformative ride. Reflecting on each moment brings me back to the many lessons learned and the numerous personal and professional skills I developed through our project with Barangay San Antonio Uno in Cavite Noveleta.

Throughout this journey, my team and I had the opportunity to engage with the local community, understand their unique challenges, and contribute in meaningful ways by developing a profiling system for their barangay. This hands-on experience not only broadened my perspective on the technological needs of small communities but also enhanced my empathy and compassion for the people we aimed to help. Working closely with the barangay officials and residents taught me the importance of listening and understanding their specific needs before acting, which is a crucial lesson for any aspiring professional.

The challenges faced during the development and implementation of the profiling system highlighted the need for better time management and organizational skills. Balancing academic responsibilities with the demands of the project was demanding, but it pushed me to prioritize tasks and manage my time more efficiently. This skill will undoubtedly serve me well in future academic and professional endeavors.

In summary, my First Academic Service Learning experience with Barangay San Antonio Uno in Cavite Noveleta has been a profound journey of self-discovery and growth. It has helped me identify areas for improvement, particularly in teamwork, time management, and problem-solving. More importantly, it has reinforced the value of community engagement and the impact we can have when we work together towards a common goal.

I am deeply thankful to Adamson University, the Computer Science Department, and the barangay officials of San Antonio Uno for giving us this invaluable opportunity. Their support and collaboration have been instrumental in making this project a success. As I move forward, I am committed to applying these lessons and continuing to develop the skills necessary to make a positive difference in the world.
